

## References relevant for STRN

The field of sustainability transition studies has expanded very fast in the last 10 years with numbers of publications growing rapidly. This may create orientation problems for PhD students or new scholars entering the field. In June 2013, the STRN Steering Group decided to attempt to provide some guidance to the growing literature. This incomplete document aims to collect the main references to articles and books. As an initial guide, the references are organised in four ways: a) linked to some of the main conceptual approaches (e.g. multi-level perspective, transition management, technological innovation systems, strategic niche management), b) linked to some important themes and debates (e.g. expectations, cities and geography), c) special issues on transitions in various journals (and some special issues not on transitions, but related topics), d) the articles that appeared in EIST (Environmental Innovation and Societal Transition). If this document proves to be useful, the organisation of literature can in future be organised differently (e.g. in terms of 'core' references and 'frontier research', or also along empirical domains, e.g. transitions in mobility, food, energy, water). To provide some further guidance, I have indicated some of the 'core' papers with \*. This qualification should not be taken for granted, as it is inevitably somewhat subjective. PhD students may want to discuss this qualification with their supervisor(s) who may have different views on what the important papers are. Despite the various caveats, it is hoped that this document provides some useful initial orientation.
